

Georgia project 5 weeks after planting (2008)

Same site 8 weeks after planting (2008)

Seven Rivers RC&D- Offering Predictable and Dependable Native Grass Installation on CP-36 projects

We pride ourselves on providing excellent customer service and great results. We have teamed up with FDC Enterprises, a QVM Certified company to provide you with a **full-turn key service including chemical application, seed and installation**. With over 109,000 acres of installation experience and a consistent 97.4% success rate, we can make your experience an enjoyable one.

Why are we so successful?

- **Superior Seed-** We select the best seed available; reprocess it to enhance purity and stratify it to greatly increase immediate seed germination.
- **Micronutrient Enhancement-** We add our Essential Nutrient Enhancement Technology (ENET) Micronutrient Blend to enhance germination success and boost seedling vigor.
- **Specialized Custom Equipment-** Our drills are re-engineered by FDCE to provide a more consistent uniform planting pattern.
- **Site Specific Herbicide Application-** We are a QVM Certified company that simultaneously (with planting) executes a site specific herbicide program to minimize weed competition.
- **Results Based Warranty-** FDC Enterprises offers the only results based warranty in the industry. We will replant the project if minimum establishment standards are not met.

FDCE's extensive "attention to detail" is the reason this Program is so successful. As one government official recently stated- "FDCE Program successes are writing new "Standards" on Prairie Grassland Establishment."
