

FDC ENTERPRISES- Specializing in Predictable and Dependable Native Grass Installation in the Green River CREP Area

Photographed 5 weeks after planting

Photographed after 2nd growing season

At FDC Enterprises we pride ourselves on providing excellent customer service and great results. Our certified staff biologists will take the time to show you the planting and chemical application process and help you understand the program from start to finish. There's no need to line up separate contractors for seed, chemical, installation and follow up. **FDC Enterprises offers a no hassle full turn-key operation.** With over 109,000 acres of installation experience and a consistent 97.4% success rate we can make your experience an enjoyable one.

Why are we so successful?

- **Superior Seed-** We select the best seed available; reprocess it to enhance purity and stratify it to greatly increase immediate seed germination.
- **Micronutrient Enhancement-** We add our Essential Nutrient Enhancement Technology (ENET) Micronutrient Blend to enhance germination success and boost seedling vigor.
- **Specialized Custom Equipment-** Our drills are re-engineered by FDCE to provide a more consistent uniform planting pattern.
- **Site Specific Herbicide Application-** We are a QVM Certified company that simultaneously (with planting) executes a site specific herbicide program to minimize weed competition.
- **Results Based Warranty-** FDC Enterprises offers the only results based warranty in the industry. We will replant the project if minimum establishment standards are not met.

Our extensive "attention to detail" is the reason this Program is so successful. As one government official recently stated- "FDCE Program successes are writing new "Standards"

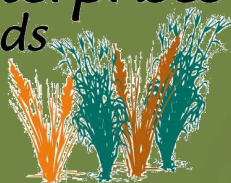

Ten tractor/drill units to meet large capacity needs

Custom built planters; modified to plant and spray native grasses
