

KENTUCKY CP-38 (SAFE) - EARLY SUCCESSIONAL HABITAT GRASSLAND ESTABLISHMENT SERVICES

Photographed 5 weeks after planting

Photographed after 2nd growing season

FDC Enterprises has consulted with Kentucky NRCS and FSA staff to provide superior grassland installation service for customers in the **Early Successional Habitat Priority Area**. There is no need to line up separate contractors for seed, chemical, installation and follow up. We offer a no hassle turn-key service. We have over **109,000 acres of experience in establishing permanent native grass, wildlife habitat and rare and declining habitat projects**. With a 97.4% success rate, we can make your experience an enjoyable one.

Why are we so successful?

- **Superior Seed-** We select the best seed available; reprocess it to enhance purity and stratify it to greatly increase immediate seed germination.
- **Micronutrient Enhancement-** We add our Essential Nutrient Enhancement Technology (ENET) Micronutrient Blend to enhance germination success and boost seedling vigor.
- **Specialized Custom Equipment-** Our drills are re-engineered by FDCE to provide a more consistent uniform planting pattern.
- **Site Specific Herbicide Application-** We are a QVM Certified company that simultaneously (with planting) executes a site specific herbicide program to minimize weed competition.
- **Results Based Warranty-** FDC Enterprises offers the only results based warranty in the industry. We will replant the project if minimum establishment standards are not met.

Our extensive “attention to detail” is the reason this Program is so successful. As one government official recently stated- “FDCE Program successes are writing new “Standards” on Prairie Grassland Establishment.”

Ten tractor/drill units to meet large capacity needs

Custom built planters; modified to plant and spray native grasses
