

FDC ENTERPRISES- SOUTH CAROLINA CP-38 (SAFE): RESTORING NATIVE GRASSES GRASSLAND ESTABLISHMENT SERVICES

FDC Enterprises has consulted with South Carolina NRCS and FSA staff to provide superior grassland installation service for customers in **Allendale, Bamberg and Barnwell counties**. There is no need to line up separate contractors for seed, chemical, installation and follow up. We offer a no hassle turn-key service. We have over **109,000 acres of experience in establishing critical nesting and brood rearing habitat that benefits bobwhite quail and songbirds**. With a 97.4% success rate, we can make your experience an enjoyable one.

Why are we so successful?

- **Superior Seed-** We select the best seed available; reprocess it to enhance purity and stratify it to greatly increase immediate seed germination.
- **Micronutrient Enhancement-** We add our Essential Nutrient Enhancement Technology (ENET) Micronutrient Blend to enhance germination success and boost seedling vigor.
- **Specialized Custom Equipment-** Our drills are re-engineered by FDCE to provide a more consistent uniform planting pattern.
- **Site Specific Herbicide Application-** We are a QVM Certified company that simultaneously (with planting) executes a site specific herbicide program to minimize weed competition.
- **Results Based Warranty-** FDC Enterprises offers the only results based warranty in the industry. We will replant the project if minimum establishment standards are not met.

Our extensive “attention to detail” is the reason this program is so successful. As one government official recently stated- “FDCE Program successes are writing new “Standards” on Prairie Grassland Establishment.”
