

FDC Enterprises- South Dakota Region

Specializing in Environmentally Responsible Removal of Cedar and Other Undesirable Woody Vegetation

At FDC Enterprises we pride ourselves on providing excellent customer service and superior results. Whether you are looking to remove cedar from your pasture and CRP or a full turn-key conversion of land taken over by invasive species, FDC Enterprises can meet your needs. After clearing is complete we can also chemically treat stumps of invasive species and re-seed the project area; offering you a “one-stop shop” habitat conversion opportunity.

Cedar Removal

Why use our service?

- **Cleaner Finished Product-** Instead of hammering away at trees like other swinging blade machines, our fixed tooth cutter heads literally cut through trees like a knife, increasing productivity and leaving a finer mulch for faster decomposition.
- **No Piling or Burning-** Our machines cut and mulch simultaneously eliminating the need to pile trees. This process also eliminates the risk and time associated with burning piles.
- **Minimal Disturbance-** Our machines have the lowest ground pressure in the industry (3.7psi) which minimizes disturbance to ground vegetation, soil compaction and root damage.
- **Precision Removal-** We can easily maneuver around desirable trees without damaging them or compromising efficiency.
- **Site Contamination Prevention-** Before every project our equipment is power-washed and cleaned to prevent introduction of invasive species from previous projects.
- **Site Specific Herbicide Option-** We are a QVM certified company that can execute a site specific herbicide program after woody material is removed.
- **Turn-Key Service Option-** We are a fully bonded and insured company with over 125,000 acres of herbicide application experience and 108,000 acres of native grass installation experience. By using FDCE from start to finish, you can reduce the headache and timing issues associated with using multiple contractors.
