

FDC Enterprises- South Dakota Region

Specializing in Predictable and Dependable Native Grass Installation for CRP, CREP, and WRP

Photographed 5 weeks after planting

Photographed after 2nd growing season

At FDC Enterprises we pride ourselves on providing excellent customer service and great results. There's no need to line up separate contractors for seed, chemical, installation and follow up. **FDC Enterprises offers a no hassle full turn-key operation.** With over 109,000 acres of installation experience and a consistent 97.4% first year success rate we can make your experience an enjoyable one.

Why are we so successful?

- **Superior Local Seed-** We use South Dakota grown seed and further process it to enhance purity then stratify it to greatly increase immediate seed germination.
- **Micronutrient Enhancement-** We add our Essential Nutrient Enhancement Technology (ENET) Micronutrient Blend to enhance germination success and boost seedling vigor.
- **Specialized Custom Equipment-** Our drills are re-engineered by FDCE to provide a more consistent uniform planting pattern.
- **Site Specific Herbicide Application-** We are a QVM Certified company that simultaneously (with planting) executes a site specific herbicide program to minimize weed competition.
- **Results Based Warranty-** FDC Enterprises offers the only results based warranty in the industry. We will replant your project if minimum establishment standards are not met.

Our extensive "attention to detail" is the reason this Program is so successful. As one government official recently stated- "FDCE Program successes are writing new "Standards" on Prairie Grassland Establishment."

Ten tractor/drill units to meet large capacity needs

Custom built planters; modified to plant and spray native grasses
