

Precision seed placement and depth control are crucial to success

2008 project 6 weeks after planting

FDC Enterprises- Specializing in Predictable and Dependable Native Grass Installation for Wildlife, Forage, Reclamation and Biofuels

At FDC Enterprises we pride ourselves on providing excellent customer service and great results. Our certified staff biologists will take the time to show you the planting and chemical application process and help you understand our process from start to finish. **FDC Enterprises offers a no hassle full turn-key operation.** With over 109,000 acres of installation experience and a consistent 97.4% success rate, we can make your experience a more enjoyable one.

Why are we so successful?

- **Superior Seed-** We select the best seed available; reprocess it to enhance purity then stratify it to greatly increase immediate seed germination.
- **Micronutrient Enhancement-** We add our region specific Essential Nutrient Enhancement Technology (ENET) Micronutrient Blend to enhance germination success and boost seedling vigor.
- **Specialized Custom Equipment-** Our drills are re-engineered by FDCE to provide a more consistent uniform planting pattern.
- **Site Specific Herbicide Application-** We are a QVM Certified company that simultaneously (with planting) executes a site specific herbicide program to minimize weed competition.

Our extensive “attention to detail” is the reason this Program is so successful. As one government official recently stated- “FDCE Program successes are writing new “Standards” on Prairie Grassland Establishment.”
